

Case Study Category: MPWW

Case Study Title: The assessment standards for gravity sewer system at City of Virginia Beach (CVB), VA

Utility Name: City of Virginia Beach - Department of Public Utilities

Case Study Abstract: This case study introduces the pipeline assessment and certification program (PACP), which was developed by the National Association of Sewer Service Companies along with the assistance of Water Research Center. PACP is a viable solution for the standardization of the identification, categorization, evaluation, and prioritization of sanitary sewer or storm sewer infrastructure through CCTV investigations. This program can be used for consistent record-keeping of CCTV investigations.
