

Case Study Category: GIS

Case Study Title: GIS Applications, Metropolitan Sewer District of Buncombe County

Utility Name: Metropolitan Sewer District of Buncombe County

Case Study Abstract: The basic Flex View Application for the ArcGIS Server was developed by ESRI Technologies. The Flex View Application provided a GIS interface with data sets that could be shared across the utility so that each department was using the same data set with the same visual formatting. The application includes a mapping service with different options for navigation, searching, querying, layer control and customized widget/tool integration.
