Case Study Title: Mountain Water Company GIS Data Management

Utility Name: Mountain Water Company

Case Study Abstract: Mountain Water Company is able to sustain its level of service by the employ of maps and geographic information systems, or GIS. The company currently maintains 295 miles of main, 5,600 valves, 1,400 hydrants, and 24 storage facilities. Tracking each of these assets for management purposes becomes less burdensome by utilization of GIS tools.
